ILLUMINATION SYSTEMS

## *Thank You for Attending!*

Thank you to all who attended our Day of Education CEU Event at Cooper Lighting Solutions on February 20. We had a great turnout and hope you left feeling inspired and informed!

## *Rocky Mountain Lights*

We hope to see all of you at Rocky Mountain Lights next month on April 9th. Make sure to stop by and say hello to the below manufacturers!

The FPS provides the high performance and aesthetic appeal of a flat panel while also providing the flexibility to adapt to the changing needs of the space, setting, or environment. A selectable switch comes standard with three selectable lumen levels and three selectable color temperatures. The low-profile design is ideal for shallow plenum grid ceilings or surface mounting. The integrated grid clips enable installation speed and flexibility. FPS is an excellent lighting solution for commercial office spaces, schools, healthcare and retail merchandising areas. ## New from Lumenwerx – CURA and RIZE

### Designed for Healthcare Environments.

Cura offers multi-function lighting with ambient, exam, reading, and night light illumination from the bedhead. Each lighting function can satisfy the illuminance recommendations of ANSI-IES RP29-16. Optional BIOS SkyBlue™ technology provides a biologically optimized light spectrum that supports both circadian stimulus and visual diagnosis. Cura's compact and durable form, combined with multiple light sources and control options, makes this luminaire particularly well suited to today's healthcare patient rooms. Cura is also available with ChromaWerx DUO and SOLA capability. [lumenwerx.com](http://lumenwerx.com)

## *Unified Glare Rating*

### **What is UGR?**

UGR is an acronym for Unified Glare Rating. UGR is an indicator of how much glare a luminaire impacts a particular location in a room. In short, will this luminaire negatively affect a person in this location?

### **Why does UGR matter?**

Good lighting design provides lighting that is appropriate for the tasks in the space, on budget and well implemented. A design with discomfort glare can lead to eye strain, inability to concentrate, headaches all contributing to reduced productivity. Advocates of biophilic design take this one step further and state that an environment designed with the health and well-being of the people in the space is beneficial on two levels. Human centric design lowers stress and increases productivity. Most importantly people feel better in the space. [-zumtobel.us](https://zumtobel.us)

**Contact your Illumination Systems sales rep for more information and for our products that include UGR information.**
